

Environmental Policy

Environmental policy is a guideline for our entire company. We have derived the environmental policy from the context of our company, taking into account external and internal issues, as well as the requirements and expectations of interested external and internal parties. In addition to the goal of customer satisfaction, optimal quality and the protection of employees from industrial accidents, we consider the preservation of the environment to be one of our main tasks.

- We are committed to protecting the environment. Negative effects on the environment are reduced through the economical use of resources and low-emission and low-waste production techniques and are monitored by regular checks and measurements (electricity consumption, waste separation and optimization of packaging for our products).
- We see the continuous improvement of our processes, procedures and actions - derived from the context of the company - which is ensured by the regular setting of environmental goals, their review and their implementation through environmental programs, as a permanent task and obligation for our company.
- Our ambition has always been to comply with our binding obligations, which we undertake to fulfil.
- We do not communicate our environmental performance externally on our own initiative because various components of our activities, products or services that have an impact on the environment are overlaid by company-specific know-how. Internal communication is comprehensive.
- Training and motivating our employees to constantly improve our processes and procedures are of fundamental importance to our company.
- We take preventive measures to reduce undesirable environmental effects within the scope of our activities and possible operational disturbances.
- Our environmental goals and the programs formulated to achieve them are embedded in corrective and preventive measures as well as in our internal audit process to ensure and continuously improve the application, suitability and effectiveness of our environmental management system and to guarantee compliance with environmentally relevant regulations and binding obligations.
- Our environmental goals and the programs formulated to achieve them are embedded in corrective and preventive measures as well as in our internal audit procedure to ensure the application, suitability and effectiveness of our environmental management system and to guarantee compliance with environmentally relevant regulations.

These guidelines are evaluated annually by the management for their continued appropriateness and are communicated personally to each employee. Every team leader has the duty to lead and motivate his or her employees also through personal examples - in the sense of these guidelines - and to ensure that the quality and environmental policy is communicated and understood.

The management encourages all self-initiatives of employees that are conducive to the practical implementation of quality and environmental policy guidelines.
